

ANNU

B.Tech Computer Science & Engineering — BPIT, Delhi

✉ ianujrathore@gmail.com |  LinkedIn |  GitHub |  LeetCode |  Portfolio

PROFESSIONAL SUMMARY

Computer Science student with hands-on experience building full-stack applications and machine learning systems. Developed end-to-end projects from design to deployment. Building foundation in data structures, algorithms, and problem-solving.

SKILLS

Programming Languages: Java, Python, HTML, CSS, JavaScript

Frontend Development: React, UI Development, Component-Based Architecture

Backend & APIs: FastAPI

Machine Learning & AI: NumPy, Pandas, Scikit-learn, Matplotlib, Supervised Learning, Unsupervised Learning, Classification Models, Regression Models, Model Training, Data Preprocessing, Feature Engineering

AI Tools & Concepts: LangChain, RAG, Prompt Engineering, LLM Applications

Databases: SQL (CRUD, Joins)

Tools: Google Colab, Jupyter Notebook

Core CS: Data Structures & Algorithms, OOP, DBMS, OS, CN

Soft Skills: Communication, Leadership, Analytical Thinking, Problem Solving, Team Collaboration

PROJECTS

Ashvaan - Mental Health Support Platform

Project Link: [Click Here](#)

- Designed a digital mental health platform for higher education students focused on **scalable system design** and **user well-being support**
- Integrated an **AI-powered chatbot** for emotional support and guidance using **API-based architecture**
- Developed stress analysis logic using questionnaire-based and activity-driven inputs for user assessment
- Built an **anonymous discussion module** enabling **privacy-preserving peer interaction**
- Collaborated in a cross-functional team to translate requirements into functional system features

AskPaper AI – RAG Document Intelligence Platform

Project Link: [Click Here](#)

- Built a full-stack **RAG** platform enabling user to upload text based PDFs and ask questions with source citations
- Implemented document processing pipeline using **PyMuPDF** with chunking and page-level source tracking
- Generated **384-dimensional embeddings** using Sentence Transformers for semantic document retrieval
- Built vector search with **ChromaDB** retrieving relevant document chunks using cosine similarity
- Integrated **Groq API** and **Llama 3.3 70B** for context-aware answer generation with citations
- Developed frontend using **React** and backend using **FastAPI**; deployed on **Vercel** and **Hugging Face Spaces**

Spam Mail Prediction System

Colab Link: [Click Here](#)

- Built an end-to-end spam email classification system using **Python**, **Scikit-learn**, and NLP on a dataset of **5,572 emails**
- Applied **TF-IDF vectorization** converting text into **17,000+ numerical features**
- Trained Logistic Regression model achieving **96.7% accuracy** with precision of **1.0** and recall of **~0.76**
- Evaluated model using **accuracy, precision, recall, confusion matrix**
- Deployed real-time prediction pipeline in Google Colab for spam/ham classification

EDUCATION

Bachelor of Technology (B.Tech) - Computer Science & Engineering

2023 – 2027

Bhagwan Parshuram Institute of Technology (BPIT), Delhi — CGPA: 8.24/10

Diploma

2018 – 2021

G.B. Pant Institute of Technology, Delhi — Percentage: 71.74%
